Keywords: Applications, Recruitment, Microsoft Visual Basic 6.0

### **Abstract:**

In the process of recruiting a company of the most important thing is to choose, selecting and processing each candidate are correct and can be placed directly on the field, experience and education under their control. Lack of awareness of the importance of the database to make all prospective employees who have or have not been processed, causing errors in the selection and processing of repetitive. To be able to make a good documentation of data and run the process according to the procedures in place diperlukanlah an application that can support the smooth process of recruitment. Therefore, the author makes an application writing process entitled Rekrutment At PT. Trikomsel Multimedia, which in scientific writing is made by using programming language Visual Basic 6.0 object-oriented in order to be able to utilize existing facilities inside the object.
